

Appointment of an Information Security Officer

So as to manage and purposefully further develop a company's information security, a central accountability should be established in the form of an information security officer (CISO). Frequently, employees who are already entrusted with other tasks are assigned this function. This can not only lead to conflicts of roles but in many cases the expertise required is lacking. In addition, continuous further training is a costly and time-consuming process. In particular for smaller enterprises it is therefore advisable to make use of an external CISO.

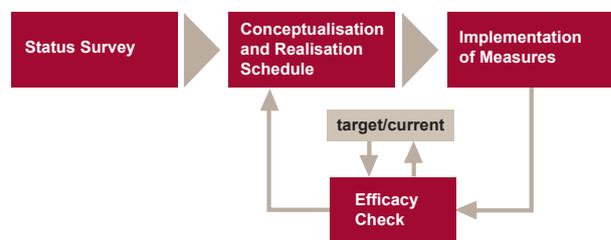

Larger companies that have a designated CISO can increase and optimise the efficacy of this role by deliberate coaching. TÜV TRUST IT consultants can assist you in thinking outside the box and assessing risks appropriately. We provide you with seasoned experts who will help you to live up to all information security risks within your company.

Procedure

In order to ensure that our consultants can support you optimally, in the initial phase we usually assess the desired/actual state of your ISMS, its operations and processes. To this end, existing audit results will be evaluated, policies examined, the IT risk process will be analysed and potential ISMS objectives will be recorded. Based on the intelligence gathered, our experts will develop a concept for the progressive operation and continuous enhancement of the ISMS. In consultation with internal contact persons, the concept will be transferred to an implementation plan that comprises information security measures to be performed, including time schedules and expense planning.

Characteristic Tasks of an Information Security Officer

After completion of the initial phase, our experts will promote and supervise the realisation of planned measures. Additionally, they will perform the regular maintenance procedures of the ISMS. These involve inter alia:

Continuous process of a CISO

- Development, maintenance and supervision of the information security concept and the information security guidelines
- Consultation on information security in general and on all projects relevant for information security
- Initiation and controlling of information security measures
- Management of/participation in information security committees
- Increasing security awareness
- Identification and updating protection requirements
- Planning of information security audits

Security and Value of Information

Our services are oriented around current best practice solutions (ITIL®, ISO/IEC 27001:2013, ISO 27001 on the basis of IT basic protection). In cooperation with you, we will adjust the direction, intensity and duration of our performance according to your specific needs. In addition to the provision of a CISO from our expert team, TÜV TRUST IT offers support for your in-house CISO in the form of coaching – one-off or routinely.

Your Benefits

- Provision of an Information Security Officer (CISO)
 - Maintenance of current information security processes and continuous enhancement
 - No internal commitment of resources
 - Your own employees will still be available for your main business
 - Reduction of costs for advanced staff training
- Coaching your Information Security Officer (CISO)
 - Expansion of your CISO's expertise
 - Optimising the efficacy of the CISO's role
 - Increasing internal acceptance
