Course	Time	Location	Price p.P. (plus VAT)
ISMS Manager - Training Including the Exam	3 Days á 8 Hours	Köln	1.540,- €

For training dates please check out our website www.it-tuv.com/en/services/trainings/. Also possible as in-house training in your company.

On the Subject

Data and information are the assets of any organisation, and therefore represent Key assets. Unauthorised access, modification, unavailability, or destruction of data from outside or inside by viruses, hackers, saboteurs, or data spies can have fatal consequences for your business. But even unauthorised access, lack of organisational regulations and procedures, targeted attacks on employees (“social engineering”) or searching through waste containers (“dumpster diving”) can endanger the continued existence of companies. With the right know-how and professionally trained experts, you can reliably introduce, manage and establish an ISMS in your company, as well as respond adequately and properly when your information assets are under attack. As part of this training you will receive the necessary knowledge and skills on how to set up, implement, audit and continuously develop an ISMS in cooperation with the top management, or integrate this into an existing management system.

Contents
