

Certification of IT Applications – “Trusted Application”

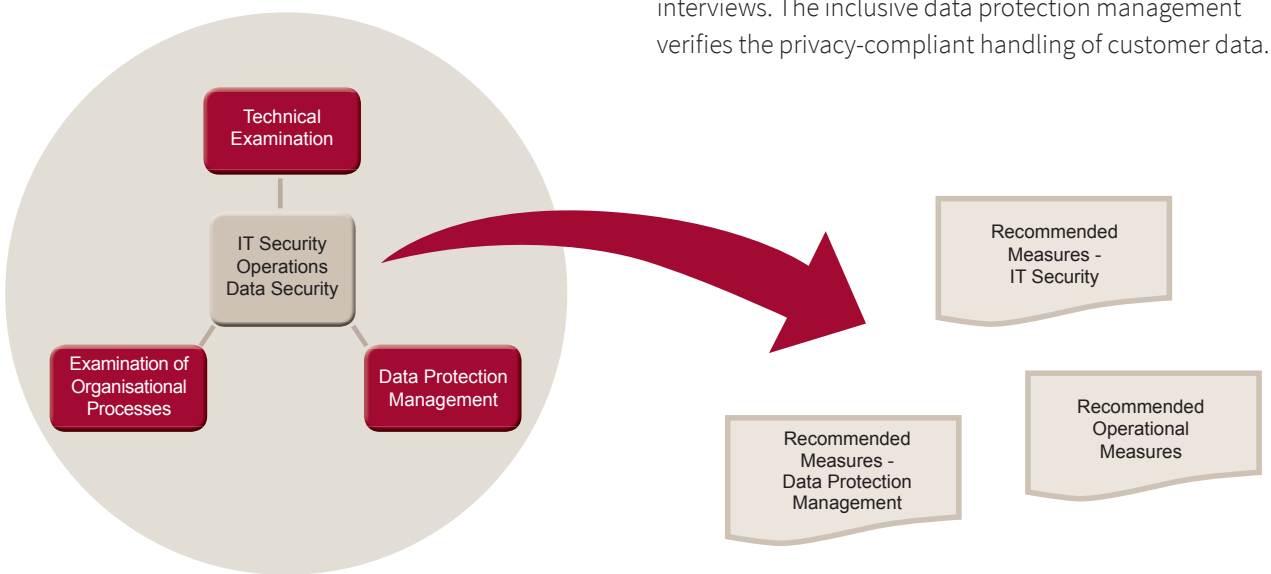

Communication over the Internet, be it professionally or privately, is nowadays indispensable. Technically, this is primarily made possible by web browsers as a central interface between users and the Internet. Adversaries attempt to exploit vulnerabilities of the Web browser in order to intercept, manipulate or destroy data and information, which can have a life-threatening impact on businesses. In order to provide users with an orientation guide to the increasingly important criteria of data security and protective mechanisms under the aspect of “information security”, TÜV TRUST IT has developed the “Trusted Application” certification.

Approach

Based on the TÜV TRUST IT requirements catalogue “Trusted Application”, we test your application. Examinations in the categories IT security, operations and data protection management will be carried out. In addition to standards such as ISO / IEC 27001 and ISO / IEC 27033/18028, the catalogue of requirements is based on TÜV TRUST IT’s own criteria and experience as well as common best practice IT security solutions. Furthermore, legal requirements (BDSG, DSG etc.) are taken into account.

Steps of Certification

The procedure in the certification project is divided into different steps, some of which can be carried out in parallel. In addition to a technical examination of the infrastructure and the relevant application (external and internal), the relevant organisational processes for administering the application and its infrastructure are also reviewed. This is done by means of documentary checks and supplementary interviews. The inclusive data protection management verifies the privacy-compliant handling of customer data.

Test procedure Trusted Application

Certification

Result Report with Recommended Measures

All results of the sub-examinations are documented in detail with appropriate proposals for measures and classified accordingly. If the result of the test is positive, a certificate with a seal of approval is issued, which documents the quality of the application. The certificate is valid for three years. You will receive two DIN A3 certificate printouts (one time framed) with your company logo and optionally a press release by TÜV TRUST IT as well as the online version of the certificate on the website of TÜV TRUST IT.

Sample seal

To maintain the validity of the certificate, annual surveillance audits are required. After the third year, a re-certification must be carried out.

Your Benefits

- Show your customers and business partners that your application meets the required level of quality and security
- Comprehensive test report highlighting potentials for improvement
- Effective competitive advantage and promotion of new customer acquisition
- Online version of the certificate on the website of TÜV TRUST IT
- The TÜV seal to foster your marketing
