

Security Incident Management

Initial situation

The initial situation involves a comprehensive analysis of your company's current security practices, incident management processes and mechanisms. This also includes the identification of vulnerabilities and potential risks.

Objective

The objectives and added value of the security incident management are defined. This includes creating effective security incident management plans to ensure that your organisation has clearly defined steps to minimise the impact and restore security in the event of a security incident.

Approach

- Needs analysis: Recording your company's individual security requirements and objectives in relation to security incidents
- Process evaluation: Evaluation of existing incident management processes, procedures and mechanisms in terms of completeness and efficiency
- Risk analysis: Identification of vulnerabilities and potential risks that could occur in the event of security incidents
- Planning: Development of a customised security incident management plan tailored to the specific requirements and risks of your company
- Documentation: Creation of clear and practical documents that describe in detail the steps required in the event of a security incident
- Implementation: Introduction and communication of the security incident management plan throughout the organisation
- Training and awareness-raising: familiarising employees with the security incident management plan and raising awareness of security incidents
- Monitoring and adaptation: Continuous monitoring and up dating of the security incident management plan to respond to changing threats and requirements

- Test and simulation: Conducting of security exercises and simulations to test the effectiveness of the plan and to train the incident management team

This process model ensures that the security incident management is performed in a systematic and targeted manner in order to guarantee an effective response to security incidents and to protect the security of your organisation.

Your benefit

- Clear instructions enable a rapid response to safety incidents in order to minimise damage
- Promotion of efficient coordination of measures among different teams
- Compliance with data protection regulations and legal requirements
- Security strategies are continuously improved by documenting and analysing incidents
- Reduction of costs and efforts in connection with security incidents
